

Deliverable 1

Questions

1. What is a web server?

A system that delivers content all over the internet?

2. What are some different web server applications?

Application 1

Apache is an open-source software that delivers web content over the internet.

- Website: [Apache HTTP Server Project](#)
- Available for: Linux, Windows, and MacOS.
- Latest Version: 2.4.66

Application 2

Nginx is an open-source software used for web infrastructure tasks beyond just web serving.

Website	Availability	Latest version
Nginx	Solaris, BSD Variants, and Linux	NGINX 1.29.5 and NGINX 1.28.2

Application 3

Microsoft IIS A web server hosting anything such as websites, media, and applications.

- Website: [Microsoft](#)
- Available for: Windows Server, Windows Client OS, and FTP Sites
- Latest Version: IIS 10.0

3. What is virtualization?

Making digital versions of something.

4. What is virtualbox?

A powerful virtualization product.

5. What is a virtual machine?

a software-based computer that runs an operating system on a host machine.

6. In the context of virtualization, what does host machine and guest machine mean?

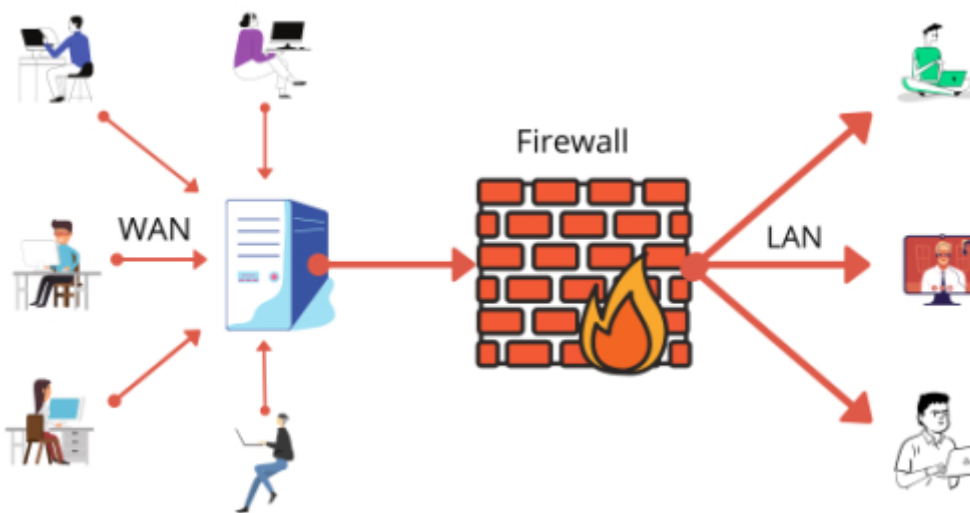

- **Host Machine:** The system that is running where the hypervisor is installed.
- **Guest Machine** The system that is virtualized in the virtual machine.

7. What is Debian?

An organization used to develop free software.

8. What is a firewall?

A tool used for enhancing security on your Linux system.

9. What is SSH?

A program for logging into a remote machine and executing commands.

10. What is an IP Address?

Identifier used for a network interface for devices to communicate.

11. What is a network mask?

Used for turning an IP address into network.

12. What is a port? (in the context of networking/computers)

A character device file that is an image of the main memory.

13. What is port forwarding?

a skill used for directing a request from one port to another.

14. What is localhost? (in the context of networking/computers)

The name of the same machine your working on.

15. What does this ip address represent 127.0.0.1?

It represents the localhost and loopback address.

16. What is Git?

Git is a underlying version control system that runs on local machines and allows you to track changes in coding.

17. What is GitHub?

An open source community where people all over the globe can work on different coding projects.

Concepts I did not understand

- **NAT network:** a skill used to use multiple devices on a local network.
- **SCP:** a command-line utility used to transfer files between local and remote systems.
- **Bridge Network Adapter:** a software part that connects two or more network interfaces together.
